

IBM Power Systems consulting services

Netburg provides consulting services for businesses, government organizations and non-profit groups that use IBM Power Systems:

- **Maximize** efficiency by installing software fixes from IBM and tuning the system,
- **Migrate** from IBM Power Systems to another platform without rekeying data.
- **Modify** software packages and custom software to maximize its usefulness to the enterprise
- **Connect** IBM Power Systems to the outside world -- to banks for ACH transfers, to production control systems with formulas and processes and to vendors with purchase orders.
- **Add** a Web interface to packaged or custom software so that business partners can get up-to-date information about customer orders.

We support all IBM Power Systems, from the AS/400 B10 introduced in 1985 to recent System i and iSeries servers including the IBM Power 595. We also can support the IBM System/34, System/36 and System/38.

Internet services

We currently provide these services:

- Domain name registration
- DNS services
- E-mail virus and spam filtering
- E-mail server backup
- E-mail forwarding
- E-mail alternatives to Microsoft's Exchange Server
- Firewalls costing under \$1,000 installed.

However, due to the continuing success of our computer consulting services, we are unable to add new customers now, so we are maintaining a list of those who wish to become new customers.

Contact us today to be added to the new customer list!

A warning about registering new domain names

If you are thinking about registering a new domain name, **do not** try it out first

- by entering it as a search term in Google or any other search engine;
- by keying in the URL window of a browser to see if it is being used; or
- by entering it into any WHOIS search page, even with a registrar you think you can trust.

Also do not send your possible domain name in an e-mail or instant message or in plain text in any form on the Internet.

A nefarious practice, called "domain name front running," occurs when someone finds out your desired name and either registers it themselves or locks it before you can register it.

Some of these companies will then try to sell your desired domain name back to you for an outrageous sum (\$30,000 was reported in one case) while others will require that you register the domain name in a specific way (if you refuse, then your desired domain name will go to another company which will simply repeat the process). Some of these companies are seemingly legitimate domain name registrars who we are not naming to protect the guilty and to avoid being sued.

The solution: Test the availability of your domain name only in the process of registering it with a registrar you have chosen carefully. If your domain name is

available, finalize the registration immediately so that you have control over it. If you have multiple possible domain names and can't choose one, register them all and then decide later which one you want. The cost of the extra registrations is a fraction of the cost of dealing with the scammers.

Netburg is not affiliated with International Business Machines Corp. "IBM" is only used to distinguish IBM Power Systems from power systems offered by many other companies.

Netburg (also spelled Netberg, Netburgh, Netbergh, Net-burg or Net-berg) is a service mark of Stevens Communications Inc. for our brand of computer consulting and Internet communications services. The use of our name without a license to sell or give away any of our services or similar services is prohibited.
